

**Press Release – Sipartech & FiberSense Partner for groundbreaking asset protection across European networks
London, October 16th 2024**

Sipartech will use the market leading FiberSense DigitalAsset™ solution to protect its network across Europe

FiberSense a deep technology fibre sensing company and the European network provider Sipartech, have today announced their partnership to deliver the world leading DigitalAsset™ monitoring and protection service on key parts of the Sipartech network across Europe.

DigitalAsset delivers enhanced network security and availability. The state-of-the-art service provides 24x7 monitoring and real-time detection and localization of a variety of threats to fibre networks, providing total “always on” cover. The early warning capability of the services allows for cued intervention before a break happens, delivering greater than 50% outage reduction, year on year.

“ Our collaboration with FiberSense, combined with our own proprietary solutions, brings a distinctive advantage to our network management capabilities, setting a new standard in the industry. It goes beyond traditional offerings by incorporating advanced fiber optic sensing technology across our network. This enables us to provide enhanced real-time monitoring and proactive security measures for critical infrastructure. In today’s increasingly complex digital landscape, where new threats are constantly emerging, we are committed to ensuring network resilience and safeguarding our clients’ assets” declared Julien Santina, Founder and CEO of Sipartech.

With initial deployments across Marseille and Paris metro networks, and a full rollout across its long-haul network in early 2025, Sipartech aims to build resiliency across its European network.

Founder and CEO of FiberSense, Mark Englund indicated “FiberSense is extremely excited to be partnering with Sipartech, a leading provider of fibre networking and services across Europe. Sipartech immediately saw the benefits of deploying our DigitalAsset service across key areas of their network to deliver real-time actionable data and insights to deliver a greater than 50% reduction in cable breaks year on year. Working together we will ensure that Sipartech has market leading resilience and uptime.”

ABOUT FIBERSENSE

The FiberSense suite of proprietary technologies leverages existing telecom fiber cables to provide valuable insights to a wide range of customers. These insights can prevent strikes to critical underground and subsea assets such as telecom, water and gas pipelines or high voltage power cables. By converting fiber into an array of sensors, FiberSense can detect, classify and track events and objects in real time, such as vehicles, pedestrians, excavators, pit tampering and route flapping events.
